

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

“The control of the schools in San Antonio is given by law to the San Antonio Board of Education, and not to individual parents, no matter how correct their consciences, convictions, faith, and religious beliefs may be.” (*Staffel v. San Antonio Board of Education*, 201 S. W., 413.)

The United States Public Health Service, in cooperation with State health departments, is collecting data regarding the prevalence of malaria and the types of infection in certain States. Card forms are mailed to the physicians each month, and when these cards are filled out and returned to the Public Health Service the data are compiled.

The following table is a continuation of the tables already published:

Summary of postal-card reports of malaria, 1918.
